EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY

Atlanta, GA

B.S. Computer Engineering

May 2028

Cumulative GPA: 3.6/4.0

Relevant Coursework: Programming HW/SW, Design and Analysis of Algorithms, Objects and Design, OOP, DSA

WORK EXPERIENCE

Subsystem Design and Data Engineer | Georgia Tech EcoCAR EV

August 2025 – January 2026

- Collaborated effectively within a cross-functional team of 15+ engineers to design and model automotive components, utilizing robust verbal and written communication to present data-driven simulation insights to stakeholders.
- Conducted exploratory data modeling and validation on over 10,000 data points, applying process improvement methodologies to increase structural reliability metrics by 15%.
- Utilized strong personal and project management skills to ensure tasks were completed on budget and on time, delivering an integrated platform 2 weeks early and reducing manual design iterations by 20%.

Software Engineering Intern | STEMPOWERed

August 2024 – May 2025

- Assisted with developing and testing software in a fast-paced Agile environment, leveraging Python and database querying to deliver data-driven solutions.
- Identified existing manual processes and designed automated frontend solutions, reducing task completion and page load time by 15% while increasing user retention by 25%.
- Optimized client-server data consumption by integrating RESTful APIs to process complex database queries, improving data rendering efficiency across the application stack.
- Contributed to the creation of technical documentation, data pipelines, and system architecture diagrams, streamlining knowledge sharing for a cross-functional team of 20+ members.
- Participated in collaborative workflows and utilized strong organizational skills to maintain a 95% on-time feature delivery rate.

PROJECTS

CareerConnect

- Worked with relational database management systems to design a robust SQL Server schema, executing data modeling and query validation to organize user profiles and achieve a 30% faster data retrieval time.
- Co-developed a full-stack web application by utilizing outside-the-box thinking to engineer automated matching logic, increasing successful job application rates by 40%.
- Collaborated to translate user needs into structured data logic, building a framework that efficiently processed applicant skill sets against active job requirements.

GTFoodTrucks

- Collaborated within an Agile development team to deliver continuous feature updates, managing sprint deliverables and Git version control to ensure the reliable deployment of user-facing systems, increasing overall sprint velocity by 20% over a 4-month development cycle.
- Engineered a scalable backend infrastructure by provisioning an RDS PostgreSQL database, applying functional knowledge of database querying tools to minimize server compute load.

Chip Floorplanning Algorithm Visualizer

- Collaborated in a cross-functional team to build a visual solver, testing code using Python scripting to optimize the spatial arrangements of over 10,000 logical nodes.
- Delivered process improvement solutions by implementing dynamic data visualization techniques, verifying a 15%+ improvement in area optimization and reducing task evaluation time by 25%.

ADDITIONAL

Skills: Python, SQL, Java, C++, Bash, HTML/CSS, SQL Server, Relational Database Management Systems, Data Modeling, Database Querying Tools, ETL processes, PostgreSQL, Agile Methodologies, Project Management Principles

Certifications: Certified SOLIDWORKS Associate (CSWA), Microsoft Office Specialist: Excel, Word, Powerpoint, IT Specialist - Java, IT Specialist - Python, IT Specialist - Software Development, edX Intro to Computing with Python
